### DETAILED ACTION

Amendment filed on April 15, 2008 has been acknowledged. Claims 5 and 8-10 are pending.

### *Response to Amendment*

Rejection of Claims 5-8 as being anticipated by Stylli (WO 98/52047) has been withdrawn in light of applicants' amendments.

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. **Claims 5 and 8-10** are rejected under 35 U.S.C. 102(b) as being anticipated by Hutchins (US 5928952).

Hutchins teaches a processing system comprising modules (18) with devices for at least one or more of the following: preparing specimens, introducing specimens, optical readout, plate storage and devices for further processing steps or readout steps; at least one central transport system (23); a internal transport system (21) for transporting the microtiter plates (32) between the different devices and the at least one central transport system (23) for asynchronous plate transform between individual modules (18) via input and output buffers (61). The internal transport system (21) transporting the microtiter plates by means of revolving tables (99) with sliding units (98). Additionally, the input and output buffers (61) are provided within the individual

modules (18). The at least one of the modules (18) is connected with a local computer (80) with externally standardized interface and the transport and/or processing and/or optical readout are/is controlled by a master computer via these interfaces. Hutchins further teaches sensor/signals that detect whether or not the respective side of the revolving table is unoccupied to ensure that no collisions occur. Hutchins further teaches means for providing a clocked operation so that a revolving table is always inserting one microtiter plate and guiding out another microtiter plate. (See Col. 6, Lines 1-55)

### ***Response to Arguments***

3. Applicant's arguments with respect to claims 5 and 8-10 have been considered but are moot in view of the new ground(s) of rejection. Refer above.

### ***Conclusion***
